No	Keterangan
1	<p>Buat Folder dalam src yaitu Action</p> 
2	<p>Beri nama actionCreator</p> 
3	<p>Masih dalam Folder Action buatlah file actionTypes.js</p> 

- 4 Kemudian dalam folder src buatlah folder dengan nama containers dan buatlah file dengan judul CreateTodo

```
src > containers > JS CreateTodo.js > CreateTodo > render > <-function>
1 import React, {Component} from 'react'
2 import { connect } from 'react-redux'
3 import { addToDo } from '../actions/actionCreator'
4 import { bindActionCreators } from 'redux'
5
6 class CreateTodo extends Component {
7   constructor(props){
8     super(props)
9     this.state = {
10       todotext: '',
11     }
12     this.onChangeTodoText = this.onChangeTodoText.bind(this)
13   }
14
15   onChangeTodoText(e){
16     this.setState({
17       todotext: e.target.value
18     })
19   }
20
21   render(){
22
23     return (
24       <div className="form-group row">
25         <div className="col-sm-10">
26           <input onChange={this.onChangeTodoText} value={this.state.todotext} type="text"
27             className="form-control" id="inputEmail3" placeholder="add todo here"/>
28           <button type="button" onClick={ () => this.setState({ todotext: '' }) }
29             style={{marginTop: "25px", marginRight: "15px"}} className="btn btn-danger">Cancel</button>
30           <button type="button" onClick={() =>{ this.props.addToDo(this.state.todotext);
31             this.setState({ todotext: '' }) } } style={{marginTop: "25px"}} className="btn btn-success">Add Todo</button>
32         </div>
33       </div>
34     );
35   }
36
37   const mapDispatchToProps = (dispatch) => {
38     return bindActionCreators({
39       addToDo
40     }, dispatch)
41   }
42   export default connect(null, mapDispatchToProps)(CreateTodo)
```

- 5 Masih dalam folder containers buatlah file dengan judul Table.js

```
src > containers > JS Table.js > default
1 import React, { Component } from "react";
2 import { connect } from "react-redux";
3 import {
4   deleteTodo,
5   toggleTodo,
6   setVisibilityFilter
7 } from "../actions/actionCreator";
8 import { SHOW_ALL, SHOW_COMPLETED, SHOW_ACTIVE } from "../actions/actionTypes";
9 import { bindActionCreators } from "redux";
10
11 class Table extends Component {
12   render() {
13     return (
14       <div className="col-lg-10 offset-lg-1 col-md-10 col-sm-12 col-xs-12">
15         <nav style={{ marginTop: "60px" }}>
16           <ol className="breadcrumb">
17             <li className="breadcrumb-item "+ (this.props.visibilityFilter === SHOW_ALL ? 'active' : '') > All </li>
18             <li className="breadcrumb-item "+ (this.props.visibilityFilter === SHOW_COMPLETED ? 'active' : '') > Completed </li>
19             <li className="breadcrumb-item "+ (this.props.visibilityFilter === SHOW_ACTIVE ? 'active' : '') > Active </li>
20           </ol>
21         </nav>
22         {this.props.todos.length !== 0 ? (
23           <table style={{ marginTop: "60px" }} className="table table-hover table-dark">
24             <thead>
25               <tr>
26                 <th scope="col">Todos</th>
27                 <th scope="col">Actions</th>
28             </thead>
29           </table>
30         ) : null}
31       </div>
32     );
33   }
34 }
```

```

31 </tr>
32 </thead>
33 <tbody>
34 {this.props.todos.map(todo => (
35 <tr key={todo.id}>
36 <td style={{ textDecoration: todo.completed ? "line-through" : "none" }}>
37 {todo.text} {todo.completed === true ? "(completed)" : ""}
38 </td>
39 <td>
40 <span className="fas fa-minus-circle" onClick={() => this.props.deleteTodo(todo.id)}
41 style={{
42 color: "white",
43 fontSize: "20pt",
44 marginRight: "20px" }}/>
45 <span className="fas fa-check-circle" onClick={() => this.props.toggleTodo(todo.id)}
46 style={{ color: "white", fontSize: "20pt" }}/>
47 </td>
48 </tr>
49 ))}
50 </tbody>
51 </table>
52 ) : (
53 <div style={{ marginTop: "50px" }} className="col-lg-10 col-md-10 col-xs-12 col-sm-12 offset-lg-1">
54 <div className="alert alert-danger" role="alert"> Todo List is empty or Filter results show no results </div>
55 </div>
56 )[" " ]
57 </div>
58 );
59 }
60 }

61 const getVisibleTodos = (todos, filter) => {
62   switch (filter) {
63     case SHOW_ALL:
64       return todos;
65     case SHOW_COMPLETED:
66       return todos.filter(t => t.completed);
67     case SHOW_ACTIVE:
68       return todos.filter(t => !t.completed);
69     default:
70       throw new Error("Unknown filter: " + filter);
71   }
72 };
73
74 const mapStateToProps = state => {
75   return { todos: getVisibleTodos(state.todos, state.visibilityFilter),
76     visibilityFilter: state.visibilityFilter
77 };
78 };
79
80 const mapDispatchToProps = dispatch => {
81   return bindActionCreators(
82     {
83       deleteTodo,
84       toggleTodo,
85       setVisibilityFilter
86     },
87     dispatch
88   );
89 };
90
91 export default connect(mapStateToProps, mapDispatchToProps)(Table);

```

6 Edit index.js dengan source code berikut ini

```

src > JS index.js > ...
1  import React from 'react';
2  import ReactDOM from 'react-dom';
3  import { Provider } from 'react-redux';
4  import { createStore, applyMiddleware, compose } from 'redux';
5  import MainReducer from './reducers/MainReducer';
6  import App from './App';
7  import registerServiceWorker from './registerServiceWorker';
8
9  const store = compose(window.devToolsExtension ? window.devToolsExtension() : f =>
10 f)(createStore)(MainReducer);
11 ReactDOM.render(<Provider store={store}>
12   <App />
13 </Provider>
14 , document.getElementById('root'));
15 registerServiceWorker();

```

- 7 Buat folder dalam src dengan nama reducers dan beri nama file FilterReducer.js dan ketikkan program dibawah ini :

```
src > reducers > JS FilterReducer.js > ...
1  import {
2    SHOW_ALL,
3    SET_VISIBILITY_FILTER
4  } from "../actions/actionTypes";
5
6  const visibilityFilter = (state = SHOW_ALL, action) => {
7    switch (action.type) {
8      case SET_VISIBILITY_FILTER:
9        return action.filter;
10     default:
11       return state;
12   }
13 };
14
15 export default visibilityFilter;
```

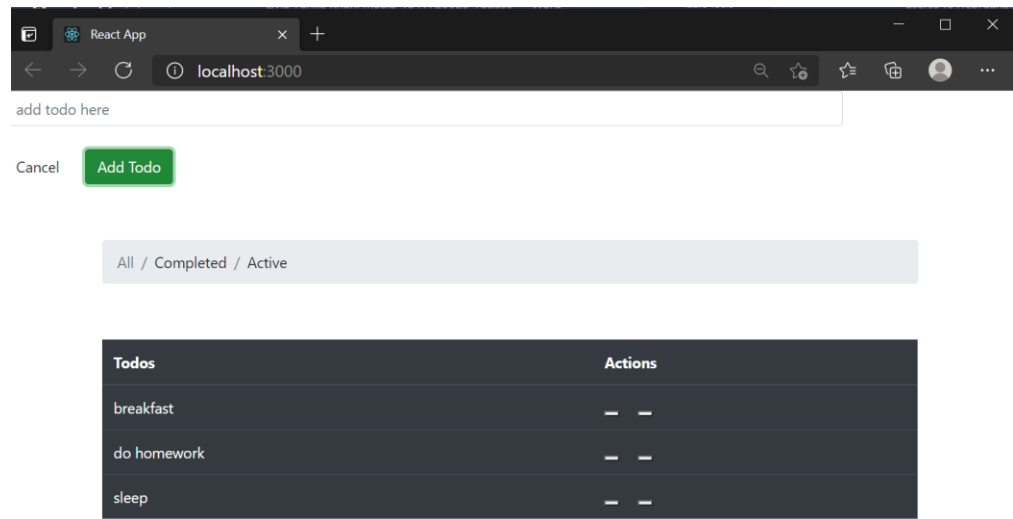

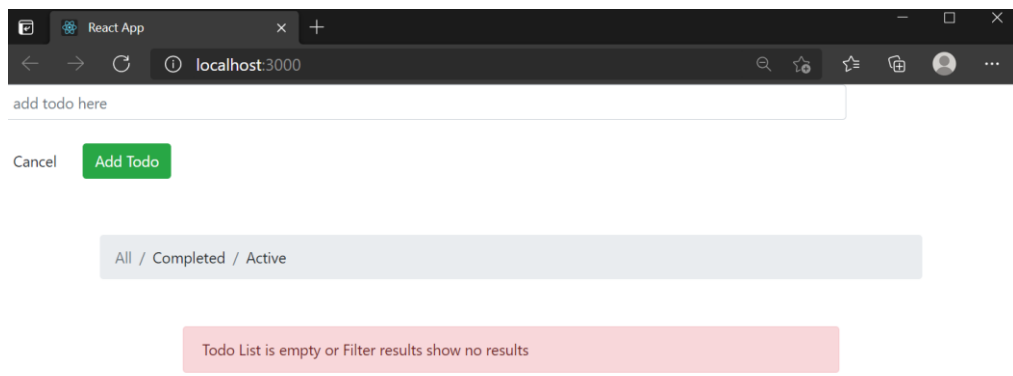

- 8 Masih didalam folder reducers buatlah file dengan nama TodoReducer.js

```
src > reducers > JS TodoReducer.js > TodoReducer
1  // if you want to show initial data :)
2  // const INITIAL_DATA = [
3  //   {
4  //     id: 0,
5  //     text: 'Walk the Dog',
6  //   },
7  //   {
8  //     id: 1,
9  //     text: 'learn Redux',
10 //   },
11 // ]
12
13 import { ADD_TODO, REMOVE_TODO, TOGGLE_TODO } from '../actions/actionTypes'
14
15 const INITIAL_DATA = []
16
17 const TodoReducer = (state=INITIAL_DATA, action) => {
18   switch (action.type){
19     case ADD_TODO:
20       return [
21         ...state,{
22           id: action.id,
23           text: action.text,
24           completed: false,
25         }
26       ]
27
28     case TOGGLE_TODO:
29       return state.map(todo => (todo.id === action.id) ? {...todo, completed: !todo.completed} : todo)
30
31     case REMOVE_TODO:
32
33       const numIndex = parseInt(action.id)
34       return state.filter(todo => todo.id !== numIndex);
35     default:
36       return state
37   }
38 }
39
40 export default TodoReducer
```

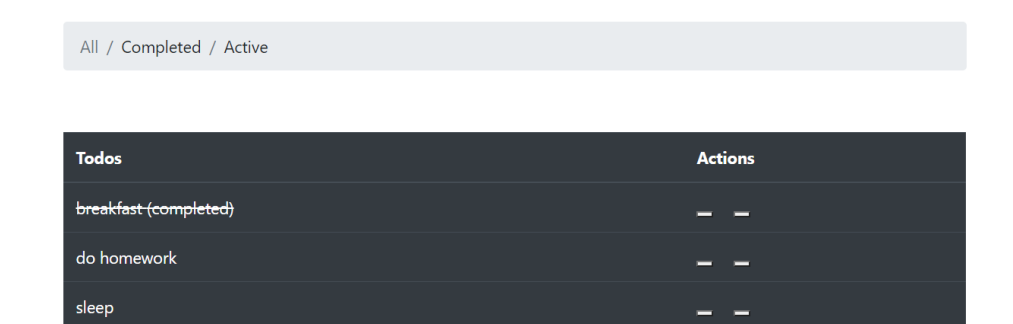

9 Buat file dengan nama MainReducer.js dan simpan

```
src > reducers > JS MainReducer.js > [⌘] default
1 import { combineReducers } from 'redux'
2 import todos from './TodoReducer'
3 import visibilityFilter from './FilterReducer'
4
5 export default combineReducers({
6   todos,
7   visibilityFilter
8 })
```

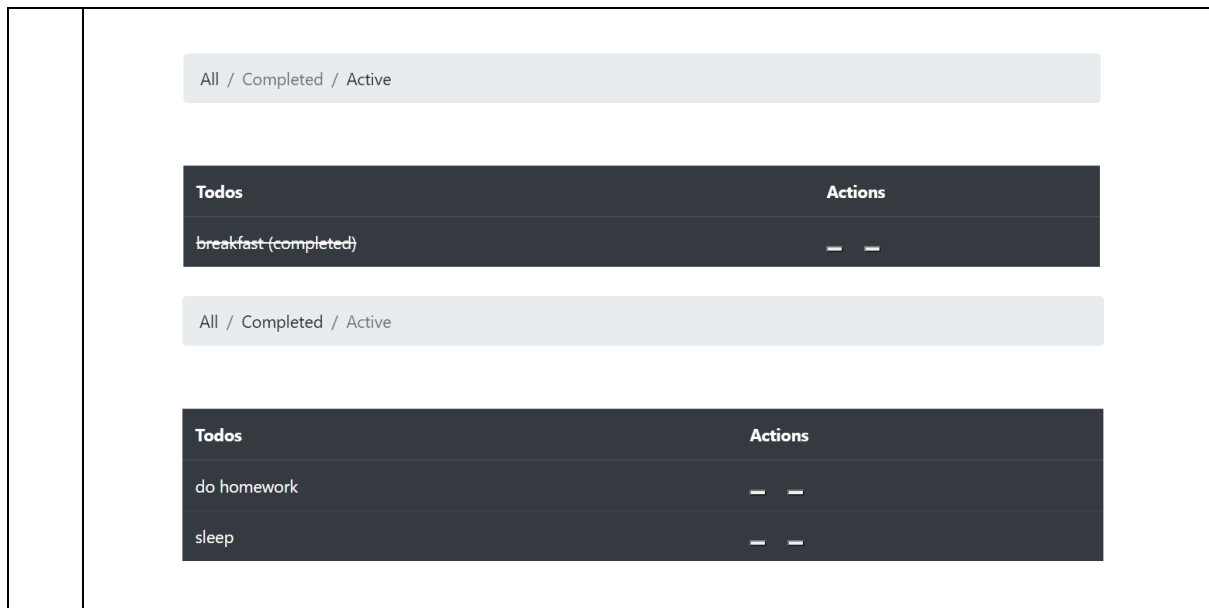

10 Running semua program dengan npm start dan liat hasilnya dan laporkan didalam laporan

Todos	Actions
breakfast	- -
do homework	- -
sleep	- -

Todos	Actions
breakfast (completed)	- -
